QUESTIONS AND ANSWERS

1 Analyze the distribution of customer tenure. What trends do you observe?

The tenure distribution shows that a large proportion of customers churn within the initial months of subscription. Customers with longer tenure remain more stable, indicating that loyalty increases as the subscription duration increases.

3 Are monthly charges related to customer churn?

Customers with higher monthly charges tend to have a higher churn rate, indicating price sensitivity among customers.

6 Use slicers to analyze churn by gender and contract type.

Slicers enable interactive analysis of churn by gender and contract type, allowing users to dynamically explore churn behavior.

8 Which customer segment requires immediate retention strategies?

Customers with short tenure, month-to-month contracts, high monthly charges, no tech support, and frequent support tickets require immediate retention strategies.

2 Which contract types show the highest churn rate?

The tenure distribution shows that a large proportion of customers churn within the initial months of subscription. Customers with longer tenure remain more stable, indicating that loyalty increases as the subscription duration increases.

4 Perform univariate analysis on churn status.

Univariate analysis shows that approximately 26.5% of customers have churned, while the remaining customers are retained.

5 Create a DAX measure to calculate Churn Rate.

% Churn Rate =
DIVIDE(
CALCULATE(COUNTROWS(Churn), Churn[Churn] = "Yes"),
COUNTROWS(Churn),
0
)

7 Identify key churn drivers using visualization patterns.

Key churn drivers include month-to-month contracts, high monthly charges, electronic check payment method, fiber optic internet service, lack of tech support, and higher support ticket counts.

9 How can churn insights influence business decisions?

Churn insights help businesses optimize pricing, promote long-term contracts, improve customer support services, and implement targeted retention strategies.
